Engine fire

Inside fires

Fuselage fire

A dramatic scene of a large aircraft engine, likely from a military jet, engulfed in intense orange and yellow flames. The engine is positioned on the right side of the frame, with its fan section visible. A firefighter in full protective gear is silhouetted against the bright light of the fire in the background. The ground is wet and reflective, showing the intense heat and light of the combustion. The overall atmosphere is one of a major emergency or training exercise.

**A team of specialists listening  
to you to build your training  
scenarios**

The image features two large, dark, spherical objects. The one on the left is in the foreground, showing a segmented top section. The one on the right is slightly further back and also has a segmented top. Both spheres are surrounded by intense, bright orange and yellow flames, with thick white smoke billowing out from the base of the fire. The background is a plain, light grey color.

Evolving scenarios depending  
on the complexity of team  
training objectives

The helicopter is now an integral part of the aeronautical landscape. These machines are becoming more sophisticated and special measures are integrated to ensure the safety of pilots and passengers. The RFFS must be trained to these measures to be in capacity to intervene of the best conditions of safety..

Our new simulator is equipped with 5 fire points and a smoke generator. Exercises may focus on extinguishing or removing pilots and passengers

A mobile mock-up that can be transported to an airport site for a dedicated training session

Investigation  
exercices on crash  
area (B737) or
